A Thief can steal a lot in 60 seconds !

SmokeStorm produces a Safe Thick Fog that Instantly hides your valuables and protects them against Theft !
We've smoked out the competition with a unit capable of producing more fog in less time than ever !
One unit that is powerful enough for large areas yet compact enough for the home.

The fog is dense yet completely safe, a 10 second burst will fill an large size premises to zero visibility.

So What's All The Smoke About ?

Smoke security is the ultimate way to protect against theft. A harmless fog is rapidly released so the intruder simply can't see. This has proven to be an extremely effective way to reduce theft. The fact is you can't steal what you can't see.

SmokeStorm Security has developed a powerful cost effective unit. SmokeStorm uses a unique high pressure pumpless design to produce a maximum amount of smoke in the shortest possible time, providing instant theft protection.

History

The smokestorm system was originally developed by Wayne Bellian as an effective way to protect expensive electronic equipment from theft. Original trials were unsuccessful in producing enough smoke to be effective. The unit was then re-designed and improved to what is now an effective way to stop theft. By use of a pumpless high pressure design and long capillary vaporisation chamber an impressive amount of non toxic clean smoke can be produced in seconds. The smoke will not stain or cause any smoke damage and once the alarm is reset and the area is ventilated business can resume as normal.

Some Frequently Asked Questions...

Will it cause any harm to my computers/electronic equipment or cause smoke damage of any kind ?

NO. It is non-toxic and will not stain or soil in anyway it can be ventilated by opening windows and doors and will dissipate in around 45 minutes.

Can it be installed on any alarm system ?

YES. It is recommended that it is used in conjunction with a monitored alarm system and the monitoring station is notified that you have SmokeStorm installed.

Will it work in the event of a power failure ?

YES. Smokestorm has battery backup.

Is it costly to run ?

NO. Once the unit has reached operating temperature (around 30-40Min.) it uses around the same amount of power as a heated towel rail.

Will SmokeStorm go off accidentally ?

NO. It is disabled when the alarm is unset.

Can SmokeStorm be blocked or covered by the intruder ?

NO. The Vapour is released at high pressure and quickly , It would be very unlikely the intruder would impend SmokeStorms performance.

Will it be mistaken for a real fire ?

Upon installation the emergency services will need to be notified that you have smoke security installed. The monitoring station will also assist in determining if it is a real fire or burglary, by the signals they have received.

You Can't Steal It
If
You Can't See It !
